

## SeaSonde Combine Suite 10 Release 6

Release 6 is complete installer for new and existing SeaSonde combine sites.

Compatible with OS X 10.4.11, 10.5.8 , 10.6.x ppc and intel Macintosh.

**SeaSonde10R6-Combine-Suite** installs all the SeaSonde Applications.

**Install-SeaSondeDocs** installs all the documentation.

**Install-MapDataBase** installs map data for SeaDisplaySetup.

### What's Critical:

This Release contains an updated SeaDisplay5 version 5.27 which will work with newer site map (.smap) files which are replacing older SeaDisplay\_Site\_XXXX files. Radial Suite if also installed, installs a SeaDisplay v6 which does not yet contain the necessary features you will still need to use SeaDisplay5 in order to create your combine grid and angseg area filter files. A Release 7 will be out soon which will handle this issue and more.

The new SeaDisplaySetup will easily update the older SeaDisplay\_Site\_XXXX site map just by opening it and then saving. (For best site map, some sites might need some minor changes to the map or manually selection a higher resolution.)

Be sure to run **Install-MapDataBase** to install the new map database for SeaDisplaySetup.
